Instructor checklist

Work down the list. The Turn tab also shows the next step under "do these in order".

BEFORE CLASS (10 MINUTES)

- [ ] Open the Kingfish ACE site in Microsoft Edge and press **Open the game**.
- [ ] Sign in as **Instructor**. To continue a game from another computer, enter its game code under **Resume a game**.
- [ ] Press **Projector**. Drag that window to the projector and press `F11`.
- [ ] Read the 6-character **join code** on the projector to the wings.
- [ ] Each wing signs in on its own computer: pick its wing and enter the join code. Wings can also run in windows on the instructor laptop.
- [ ] Game menu: run **Pre-class check**. Fix anything marked with an X.
- [ ] Optional: **Game setup** (Save game tab): points to win (each wing), days, turn and planning timers, first situation and first conflict turns, and **Run turns automatically** (on by default).

PLANNING PHASE

- [ ] Press **Roll base access** first. Wings cannot request spokes until it has rolled.
- [ ] Press **Start the planning timer**.
- [ ] Wings choose 3 spokes, roll aircraft, then pick and roll RFIs at each approved spoke.
- [ ] Spoke requests: automatic turns on, they are approved as they arrive. Off: approve or deny under **Team base requests**.
- [ ] At 0:00 turn 1 starts by itself (or press **End planning · start turn 1**).

TURNS 1 AND 2: SETTING THE THEATER

- [ ] No situation, no Mission hexes, no Red. Wings open bases and move forces.
- [ ] Run each turn as shown under "Every turn".

EVERY TURN

- [ ] **Automatic turns on:** at 0:00 the turn ends, approved moves happen, Red's dice roll, the turn card shows, then any dice, and the next timer starts 3 s after the dice close. You only watch, answer Comms and apply cards.
- [ ] **Off:** at 0:00 the move window opens and waits. Decide spoke moves and roll the dice, then press **Close moves · start next turn**.
- [ ] Wings act: airlift, staff tasks, fighter sorties, buy supplies with Resource Points. There are no supply requests to approve.
- [ ] Apply any card that says **Instructor applies this card**.

TURN 3: FIRST SITUATION

- [ ] The situation rolls by itself (off: press **Roll the situation**). Before turn 7 it is always a crisis.
- [ ] Gold hexes on the map are the **Mission hexes**. Each fighter flown there from a spoke earns 5 MP; one scoring 4-ship per wing per hex per turn.

EACH NEW DAY (TURNS 4, 7 AND 10)

- [ ] Base access, then the situation roll by themselves (off: press **Roll the situation**).
- [ ] Wings roll their aircraft for the day. Automatic turns on: each wing hub may get up to 2 items its best spoke lacks for IOC (shown in Comms).
- [ ] Logistics tax is collected by itself. Check the **Logistics tax** line for any base out of food, water or fuel.

CONFLICT TURNS (TURN 7 OR LATER)

- [ ] Red defenses and jammers appear by themselves.
- [ ] At end of turn Red attacks **one random airfield per wing** inside the DF-26 ring (hubs included). Red's D20 rolls by itself (off: **Roll D20** under **Missile attacks**). Each wing presses **Roll D10 defense**. A tie is defended.
- [ ] A wing that is away: press **Roll for wing**. Each conflict day every hub gets 4 bombs and 4 air-to-air missiles.
- [ ] A struck spoke stays closed until **Base recovery** (task 15) is done. A struck hub reopens after 3 turns.

END OF GAME

- [ ] After the last turn the debrief opens: score chart by turn and a Win column (a check, or what each wing lacked). Save game tab: **Export AAR log** for a record.

Where things are

The instructor panel has six tabs. The Game menu sits at the top right.

Tab or menu	What you do there
Turn	The step list for this turn · shift timer (start, pause, +1 / −1 minute, hide) · **End turn** and **Undo last step** · resource requests · team base requests · missile attacks · the TODAY box: base access, Mission hexes and Red, with **Roll base access again** and **Edit Mission hexes**.
Map	Click any hex first. Then: **Highlight**, Mission hex on or off, **Move base here** (game master), base status, RFIs at that base and **Unlock new RFIs**, **Effects** (airfield strike, jamming, cyber; on a wing base) and **Announcements**.
Airlift	Every wing's airlift plans and flights.
Wings	Each wing's bases, people and resources at a glance.
Dice	Start of the day: situation and intent, aircraft for a wing, base access. During a turn: airfield attack, competing priorities, any die. Leave a box blank to let the game roll, or type a number to use a table roll.
Save game	Game code and save status · **Pause and exit** · **Resume another game** by code · **Download a copy** · **Export AAR log** · **New game** · Game setup.
Game menu	Pause or start the timer · **Undo last game-master action** · **Pre-class check** · **Download a copy** · **Pause and exit** · **Restart game** · **Restore last game** · Hide panel · Sign out.

KEYBOARD

`Space`	Start or pause the shift timer
`H`	Hide or show the instructor panel (more room for the map)
`Esc`	Close a pop-up or menu; otherwise clear the selected hex
`Ctrl` + `Z`	Undo the last game-master action

SAVING

> The game saves itself after every change, online under its game code and on this laptop. To continue on this laptop, sign in as Instructor. To continue on any other computer, sign in as Instructor and enter the game code under **Resume a game**. Wings rejoin with the same code.

IF SOMETHING LOOKS WRONG

A wing screen looks out of date	Press `F5` on that window. Nothing is lost.
A window was closed	Open the site again and sign in with the same role and join code.
Wrong click on End turn	Turn tab: **Undo last step**.
Wrong game-master action	Game menu: **Undo last game-master action**, or `Ctrl` + `Z`.
Started a new game by mistake	Game menu: **Restore last game**.
Wings cannot join on this network	Run every wing in its own window on the instructor laptop.
A rule question comes up	The instructor decides. Use **Move base here**, **Edit Mission hexes** or the Dice tab to apply the call.

Game flow

Default setup: 12 turns over 4 game days. Each turn is an 8-hour shift on a 20-minute timer; planning is 30 minutes. Game setup changes both.

Turn	Day and shift	What happens
Planning	Before Day 1	Base access roll. Wings choose spokes, roll aircraft and RFIs, load chalks and plot routes.
1	Day 1 · day	Setting the theater: no situation. Aircraft fly; cargo lands at the end of the turn.
2	Day 1 · swing	Setting the theater. Wings staff airfield tasks toward IOC.
3	Day 1 · night	First Situation roll: crisis. Mission hexes appear; fighter sorties earn points.
4	Day 2 · day	New day: situation, base access and aircraft roll again; logistics tax. Still a crisis.
5 – 6	Day 2	Crisis turns.
7	Day 3 · day	New day. From here a conflict is possible: Red defenses, jamming and missile attacks at End turn.
8 – 9	Day 3	Crisis or conflict as rolled.
10	Day 4 · day	New day roll.
11 – 12	Day 4	Final turns. The debrief scoreboard opens after turn 12.

SCORING

Mission Points (MP)	+5 when a spoke reaches IOC (first wing there) · +5 per airfield assessment · +5 per fighter flown from a spoke into a Mission hex (one 4-ship per wing per hex per turn) · +5 per turn for integrated combat turns and specialized refueling.
Demoralization Points (DP)	Too many idle people at a base · no food or water (10 DP the first day, 30 each day after).
Resource Points (RP)	+1 per turn for host nation relationships. 5 RP buys one food, water, tent, fuel, bomb or air-to-air missile chit (Bases tab).
Score and win	Score = MP minus 1 for every 5 DP. A wing has won at 100 points (Game setup) with its hub and at least one spoke at IOC. The class wins when all four have.

CRISIS AND CONFLICT

Crisis	Tension, no shooting. Red is not attacking. Fighters reuse bombs and missiles.
Conflict	One random airfield per wing inside the DF-26 ring: jamming or cyber (comms cut a turn), then a missile attack. Each fighter sortie uses 1 bomb and 1 air-to-air missile.
A struck spoke	Closed: no aircraft or fighters leave and no fighters move in until Base recovery (task 15: engineering + airfield repair kit, 3 turns) is done. A second hit restarts recovery. A third hit destroys everything there.
