Instructor quick start

Before people arrive (10 minutes)

1. On the instructor laptop, open Kingfish ACE in **Microsoft Edge**. Every screen runs on this one laptop, in the same Edge.
2. Choose **Instructor**, password **Admin1**. If a saved game is found, pick **Continue saved game** or **Start new game**.
3. Press **Projector**. Drag it to the projector screen and press **F11**.
4. For each wing: open Kingfish ACE in a new Edge window and pick **Wing 1**, **Wing 2**, **Wing 3** or **Wing 4**.
5. On the **Save game** tab, press **Pause and save to file** once so you have a clean backup.

> Keep the **instructor window open** the whole game. It saves the game for every screen.

Planning phase (30 minutes)

1. Press **Roll base access** first. Then each wing picks its 3 spokes, rolls its aircraft, then picks and rolls RFIs.
2. Automatic turns on (default): spokes are approved as they come in. Off: approve them on the **Turn** tab.
3. Wings load chalks and plot routes. Aircraft fly once turn 1 starts.
4. At 0:00 turn 1 starts by itself, or press **End planning · start turn 1** when every wing is ready.

Each turn (20-minute timer)

Step	Who	Do this
1. Start of day	Instructor	Automatic: base access, then the situation, roll by themselves; Red appears by itself in a conflict. Off: Dice tab, **Roll** next to Situation. Wings roll aircraft.
2. Shift timer	Instructor	Automatic turns on: the timer starts by itself after the dice. Off: Turn tab, **Start shift timer**.
3. Wings act	Wings	RFIs, chalks and routes, staff tasks, move and launch fighters, buy supplies with Resource Points.
4. End turn	Instructor	At 0:00 the game moves on by itself (or press **End turn · open move window**). Aircraft land, tasks progress, cards are called, points post. Turn card, then dice, then the next timer.
5. Conflict only	Instructor	At 0:00 Red attacks one random airfield per wing (hubs included). Red's D20 rolls by itself; each wing rolls its D10 defense.
6. Move window	Instructor	Automatic: spoke requests are approved as they arrive and move at 0:00. Off: decide them, then **Close moves · start next turn**.

If something looks wrong

- **A wing screen looks out of date:** press F5 on that window. Nothing is lost.
- **A window was closed:** open Kingfish ACE again and pick the same role.
- **Wrong click on a turn step:** press ← **Undo last step**.
- **Break or end of day:** Save game tab, **Pause and save to file**. To come back, sign in as Instructor and pick **Continue saved game** (or **Resume from file**).
- **Start over:** Save game tab, **New game**. A backup file of the old game downloads first.
- **A rule question comes up:** write it on the observer sheet and keep playing.

Observer checklist

Watch one wing or the instructor. Write down what you see, not what you think they meant.

Time

Event	Clock time	Notes
Sign-in done, all screens open		
Planning phase done		
Turn 1 done (timer + end turn + moves)		
Turn 2 done		
First conflict phase done		

Where people got stuck

Screen or step	What they tried, what happened

Check each one you saw

☐ Someone asked "what do I click?" ☐ A number or result looked wrong ☐ Text too small to read

☐ A screen did not update ☐ A rule felt unfair ☐ The 20-minute timer felt too long or too short

☐ Someone wanted to do something the program would not allow

Bugs or rule questions

Player feedback (2 minutes)

Role today: ☐ Wing 1 ☐ Wing 2 ☐ Wing 3 ☐ Wing 4 ☐ Instructor

Question	1 = strongly disagree · 5 = strongly agree
I knew what to do next without asking.	1 2 3 4 5
The screens were easy to read.	1 2 3 4 5
The program felt like real software, not a prototype.	1 2 3 4 5
The game made me think about ACE planning: dispersal, airlift, base opening.	1 2 3 4 5
The pace (20-minute turns) was right.	1 2 3 4 5

What was the most confusing part?

What should we change first?

Anything that looked broken?
